PROFESSIONAL SUMMARY

Product Designer with a strong foundation in Cognitive Psychology, specializing in end-to-end processes — from Discovery and User Research to the delivery of functional products in production. Differentiator in integrating **generative AI throughout the entire design workflow**, accelerating ideation, prototyping, and implementation cycles without compromising methodological rigor. Proven track record in high-growth international environments, leading gamification projects, retention systems, and products with multiple user profiles. Expert in translating strategic product vision and behavioral metrics into intuitive interfaces and measurable results, with a focus on Mobile-first and OKRs.

PROFESSIONAL EXPERIENCE

Team App — *Product Designer & Developer (Freelance) (2026 - Present)*

Freelance project for athletics team management, developed end-to-end — from user research to production deployment.

- Product actively used by **163 athletes and 3 coaches**, with **Information Architecture and Interaction Design** for distinct access profiles — including a "master" role with exclusive financial dashboard access.
- Conducted continuous **Usability Testing** cycles with real stakeholders, collecting and implementing feedback from athletes and coaches directly into experience improvements — reducing friction in critical flows with each iteration.
- Applied **Design Thinking** methodology in a full **Product Discovery** process with **User Research**: mapping 2 personas, defining jobs-to-be-done, and prioritizing features by user impact.
- Used **generative AI as an implementation tool**, with business logic, role-based access rules, and data flows defined beforehand — translating product decisions into functional code without relying on an engineering team.

- Full-stack technical implementation with **React + TypeScript and Supabase**, taking end-to-end ownership from research to deployment — delivering a functional production product from **high-fidelity Figma prototyping** to code, mobile-first.
- **Cross-functional collaboration** with coaches and athletes as primary stakeholders, aligning product requirements, technical constraints, and business objectives throughout the development cycle.

MarketBlitz *Product Designer (January 2026 - March 2026)*

- Leading Product Design for a gamification ecosystem focused on user retention within a live-streaming hub platform.
- Concepted and designed an end-to-end "Shop" feature, enabling monetization and digital asset redemption by integrating internal economy logic into the UX flow.
- Implemented a data-driven culture through behavioral analysis using Microsoft Clarity, identifying usage patterns and leading a strategic transition to a Mobile-first approach.
- Managed a direct strategic partnership with the international CEO, conducting meetings, presentations, and technical documentation entirely in English.
- Responsible for information architecture, complex user flows, and defining front-end logic to ensure technical feasibility and delivery consistency.

BlinkPlanet *Product Designer (April 2024 - December 2025)*

- Led the design and user flow for a Web3 Marketplace Digital Album feature, which became the platform's primary user acquisition channel.
- Generated R\$ 60,000+ in direct revenue from digital asset sales (trading cards), validating the collectible business model within the ecosystem.
- Directed the end-to-end design of a Social App, reaching 7,000+ active users and increasing average session duration to 2.3 hours.
- Optimized conversion rates (CRO) in the onboarding funnel, resulting in a 15% increase in new user sign-ups.
- Achieved a 25% reduction in Time-on-Task for referral flows through AI/UI redesign, driving organic growth of 2,500+ invited users.
- Served as the UX point of contact for aligning strategic OKRs with Engineering, Marketing, and Product stakeholders.

Stoque *UX Design (February 2023 - March 2024)*

- Created high-fidelity prototypes and complex interaction flows for enterprise clients, significantly reducing project approval times.
- Developed and maintained Figma component libraries (Design Systems), enhancing handoff efficiency and agility for the development team.
- Leveraged technical skills (XML, JSON, HTML/CSS) to ensure design solutions were scalable and compatible with system constraints.

KEY SKILLS

- **Product Design:** Design Thinking, UX Research, Information Architecture, High-Fidelity Prototyping, Usability Testing, Design Systems, Mobile-first Design.
- **Strategy & Data:** Metrics Analysis (Clarity/Analytics), Gamification, OKRs, Cognitive Psychology, Strategic Product Vision.
- **Technical Tools:** Figma (Advanced), Generative AI (Claude, Antigravity, Gemini), React, TypeScript, HTML5, CSS3, JavaScript, Technical Documentation.
- **Soft Skills:** Product Strategy, Cross-functional Collaboration, Human-Centered Design, Critical Thinking.
- **Languages:** English (Advanced – Professional International Experience), Portuguese (Native).
-

EDUCATION

- **Bachelor's Degree in Psychology** | PUC Minas (2015 - 2020)
- **Professional Certification in Product Design** | Gama Academy (2021)
